

Lynxspring Announces New BACnet® MS/TP Portfolio

Attention Lynxspring Business and Technology Partners:

We know you require automation and integration solutions with quick ROI and long-term scalability and reliability.

It is with this in mind, we are pleased to introduce you to **Onyx® LX**, our new modular and scalable portfolio of BACnet® MS/TP configurable, ASC controllers, smart thermostats, and digital room sensors.

Delivering powerful control, connectivity, and visualization, the **Onyx LX** portfolio offerings, natively support the BACnet protocol and are BTL certified.

Full featured and multi-functional, the **Onyx LX** portfolio:

- Are BTL listed, UL and ETL certified zone ASC controllers that are factory delivered with application programs on board.
- Are field tested and proven: deployed in over 1,200 sites.

- Enables seamless integration under any BACnet building automation system including Niagara.
- Niagara configurable.
- Have simple configuration parameters: Using the local HMI interface, BACnet objects under Niagara or with a simple light commercial software, just set your configuration application parameters to meet most required terminal HVAC equipment such as VAV's, HP's, RTU's FCU's, small AHU's and others.
- Come factory pre-programmed with typical applications for HVAC Equipment and VAV Box.
- Pre-built, configurable graphics along with site specific graphics and scheduling.
- Can be deployed as a standalone solution for small to mid-size projects and integrated into any enterprise BACnet Platforms.
- Ideal to provide automation to a market segment normally serviced by standalone applications such as programmable thermostats. Utilize the power of the native factory loaded applications to meet small building opportunities.
- Competitively priced.
